

Access 3000 A3NS

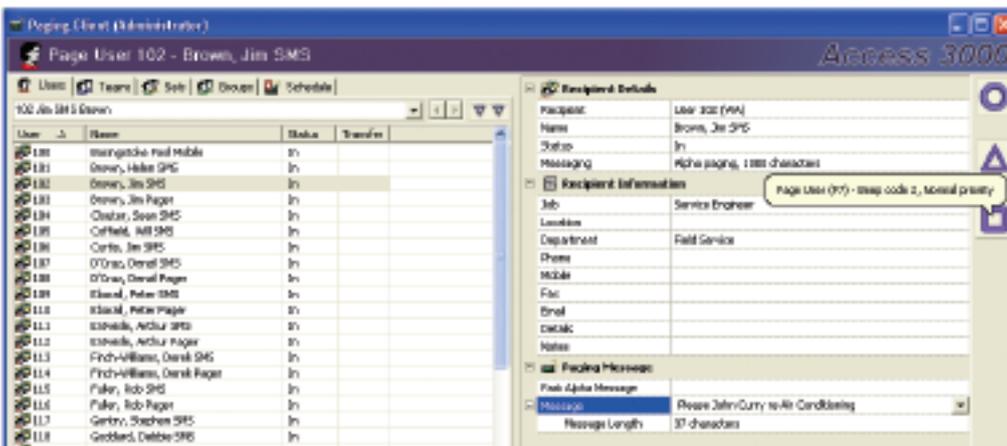

“THE” MESSAGING SOLUTION FOR YOUR COMMUNICATION NEEDS...

Multitone - Making Message Management Simple

Access 3000 Server is an exciting new software package from Multitone. Bringing the wireless revolution to the desktop it connects Access 3000 to your computer network, delivering fast, effective text messaging to pagers, mobile phones and cordless handsets. With its web paging capability it enables anyone across your corporate Intranet to text or page. Simply log on via the web browser, enter your message and page. With the potential of a global wireless network, Access 3000 Server keeps you in-touch with staff, colleagues and people regularly on the move around the office, in the field or right across the world.

Messaging from the PC Client

With software that is easy to use, messages can be initiated from any PC; this means that your whole team can benefit from sending messages as easily as email. What's more, with its powerful search facility, it will help you locate half remembered names or numbers, it will even enable you to search by department, job-title or by a persons location; effectively making wireless messaging quicker and simpler than ever before.

Administration from the Management Client

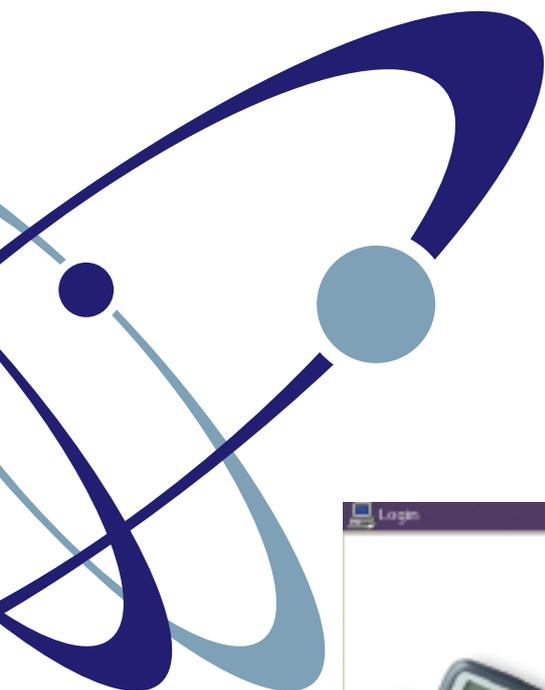

This package includes a fully networked version of the Access 3000 Management Terminal; providing complete on-screen management of users, teams, closing contacts, pre-set messages and the wide area messaging facility. It also enables you to create new clients, set passwords and incorporates a full range of tools for statistical analysis and call logging. In short this version of Management Terminal delivers total system management for both the paging system and the Access 3000 Server.

Call Scheduling Made Simple

Access 3000 Server incorporates a powerful call scheduling capability. As a mobile time manager it automatically initiates messages to pagers, mobile phone or cordless handsets, calling for action; be it an appointment, a regular task or even a sporadic event, the call scheduler puts you in control. Calls can be scheduled on a daily, weekly, monthly or even on a yearly basis. Simply select the user or team, set the time and the date, enter the action and Access 3000 Server does the rest; maximizing total task response.

Create Scheduled Call	
Paging Details

Password Protection & Client Access Control

You may not want to give every desktop user the ability to send a team call, nor would you want anyone to have access to the system management functions. So in order to preserve server, network and paging system security, password protection, access control and client type selection is provided, helping you to maintain total peace of mind.

A Failsafe Solution

To maximise system integrity Access 3000 Server has been designed to operate as an adjunct to the Access 3000 paging system. This ensures total system independence between the paging system and server. So if the server or network fails, paging operations are fully maintained.

Quick and Simple System Installation

Access 3000 Server is also simple to install. Just connect the Server to the Access 3000 paging system and your PC network, enter the Access 3000 CD-Rom and the system self-installs. What could be easier than that?

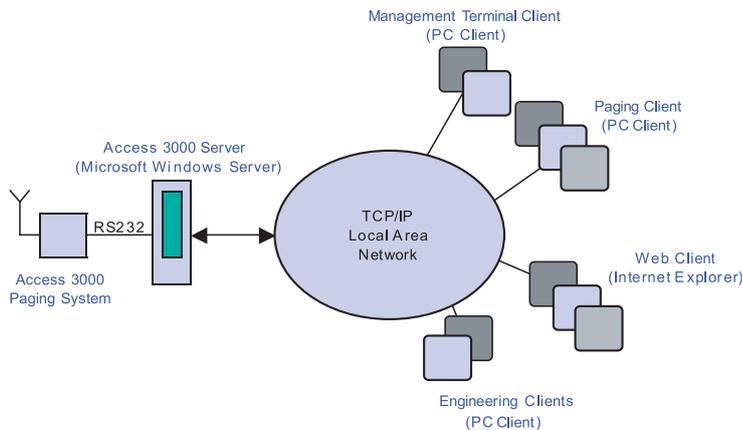

A3NS Specification - System Schematic

Access 3000 Server is a client-server based system designed primarily for Microsoft Windows Server supporting Internet Information Server (IIS) version 4.0 or above. This software comprises a server program, Access 3000 Web Access and three clients:

- Access 3000 Paging Client
- Access 3000 Management Client
- Access 3000 Engineering Client.

These clients additionally support Windows 98 and ME and communicate with the server via a local area network connection.

Web Client

- Quick and simple text messaging
- Group messaging
- Password control

PC Paging Client

- User, team, sets and group paging
- Super search feature
- The ability to set-up and edit personal groups

Engineering Client

- Server database back-up and restore
- Access 3000 database backup and restore
- Online and offline operation
- Access 3000 monitoring online

Management Terminal Client

The Management Terminal Client supports all Access 3000 administrative features and also includes the capability to create and edit new clients and management elements of the Access 3000 Server. Features include:

- User, team, sets and group paging
- User, team, format group and sets create, edit and delete
- DLC create, edit and delete
- Pre-set message edit
- Wide area dial-out configuration for Paging and SMS messaging
- System time editing
- Paging and Management Terminal client, create, edit password and access rights administration
- Server event log monitoring
- Call logger configuration
- Call logging of all paging messages
- Help facility
