

Multitone WP™ POCSAG Pager

Why Multitone? - Communication works best as a team

Multitone Electronics are communication specialists. We work with a number of differing technologies designed to complement each other and give you the messaging options that fit your organisation and strategy. We understand that paging is only one factor within your communications remit, but by including the Multitone WP pager in the mix we can offer a robust communication device for your most demanding of working environments.

Our expertise and product suite ranges from working with the emergency services delivering time critical messages, such as mobilising a cardiac team in a hospital, or mobilising a fire station; to ensuring school teachers working in challenging environments can get immediate access to support and assistance or just informing warehouse operators or retail staff, of what items needs to be collected.

Whatever your communication needs, Multitone can provide the answer, be it equipment focussed, single point of contact for support, standard telephony, professional services or a bespoke infrastructure. We offer product and service options that combine together to create a communication suite which meets the needs of different industries and organisations, be they large or small.

Multitone WP

Communicating in all environments when you need it most

Communication - getting it right means success

Communication is the key to any successful business, it makes things happen. Getting the right combination of communication options and devices can be complex. You need to consider the best way for your staff to get the right message, delivered in the best way for them. You then need to decide what the right device should be, as not all staff need information delivered in the same way. Running in parallel to these considerations are the cost implications to your business and the possible return on investment.

Communication - rugged and robust

The Multitone WP pager is designed to work in some of the hardest business and operational environments. If your staff have to work in testing conditions, shouldn't you expect the same from their communication device? The design of this equipment is rugged, yet very simple to use, allowing your teams to focus on working with each other and not the complexity of the device.

The Multitone WP pager is a waterproof and dustproof POGSAG pager, with up to 4000 hours battery life as standard.* The build of this device ensures it will continue to function correctly if it gets wet, (IP67 rated and tested in water up to 1m deep), is subjected to large quantities of dust, or gets dropped. A communication device that is capable of working under this level of duress can truly be described as rugged and robust and is rated as IP67 standard.

* Dependant on use. Based on normal usage.

Pagers are an important part of the Emergency Services communication mix, as they are considered one of the most robust and portable methods of communication and have been specifically designed to deliver instant mass communication. If you need to communicate to staff in difficult conditions choose the communication method to match.

Control of workforce logistics is an essential factor for any business. Being able to communicate with differing teams of staff to ensure they are at the right place at the right time, saves time.

Flexible communication

Many industries need to communicate with different groups or teams of workers, be they engineers, on-site builders or warehouse staff. Paging is an excellent method of giving instructions to groups of people at the same time and can be integrated into your current communications infrastructure easily.

The Multitone WP pager can be programmed with multiple profiles to suit varying groups or teams, to fit in with your specific work patterns and requirements.

Programming and management of your Multitone WP pager is simply achieved by linking it up to a computer via a standard USB cable which links to the pager cradle. Users and work groups are defined, standard messages can be pre-programmed and up to fourteen different tones can be specified to give an instant audible meaning to an alert.

To make messaging simpler for you, the Multitone WP pager can be set up to identify specific working groups, who are on a pre-defined shift. You can then ensure that you only send out messages to those relevant groups. This gives clarity to your communication – only those that need to receive a message do so.

Ensure that you can instantly contact and control different teams within your organisation – one message to your targeted employees will inform them where they need to be and when.

In business today, many work forces are becoming more transitory, employment may be on a contractual basis. The teams employed in difficult environments may only be active for short periods of time, before going on a rest break. The configuration of the Multitone WP pagers ensures that you can easily alter the status of teams as often as you need to keep in line with your employee working patterns.

Cost containment

The Multitone WP pager boasts simplicity, functionality and a practical design that makes it a valuable asset to your communication tactics.

With no on-going usage charges, paging is an excellent way of controlling your communication expenditure.

Key benefits

- Rechargeable
- Waterproof and dustproof up to IP67 standard
- Easy to programme using a PC and cradle
- Easy to organise and define groups – message and alerts are sent in an efficient and co-ordinated fashion
- Long battery life, 4000 hours under normal usage conditions
- Pager profiles allow the user to change their configuration according to the time of day or duties required
- Record the last 40 calls made, giving an audit trail
- Cradle switchable contacts
- Two years warranty
- A bright luminescent LED indicates message receipt when in cradle
- The cradle has contacts to activate a remote device
- Compatible with paging transmitter frequency VHF – 143Mhz to 175Mhz, UHF – 446Mhz to 471Mhz
